HC-0001

Complete Hot Half - Custom Mould Base - Controller.

UTP's Hot Base Solution is a high-performance mould base platform that combines a standard or custom machined mould base with a Hot Half Hot-Runner System from Heatlock.

It is an individually engineered platform - fully designed to the specifications of the user - and is completely flexible, it can easily be equipped with high-end UTP components and accessories as well as precision inserts manufactured by UTP. Specialty mould base designs can include: side entry, multi-material, high cavitation and stack tooling.

The aim is to free up capacity at tooling suppliers from repetitive work and time-intensive catalogue researching. Toolmakers can fully concentration on the detailed cavity and core work and the success of the project.

The new platform allows end users to place stricter manufacturing deadlines on their favorite Toolmaker with confidence in his ability to deliver on time.
